

Pseudo code

```
start
create("project2.html")
li<-read("ISBN.txt") //Store the ISBN into list li
n<- li.length
i = 0
while i<n:
    a<-call("open library.org", li[i]) // Call the book detail in open library API
    if a ==null:
        print("error in finding book " + li[i])
    else:
        print(successfully find book li[i])
        add( a, "project2.html") // add book details into html file
    i = i+1
generate("project2.html")
end
```
